1. The authentication app enables you to manage all the aspects of user identity use autho.it offer end point so user can login in sing up log out, access app ,the API support various identity protocol, the authentication app is served over. The URLs the documentation following in method
The authentication within the only with your client id each endpoint supports only one option
In case , your have to send client secret information in the request json body
Use the endpoint to authenticate a user with a social provider it will redirect to the social provider
Use this endpoint to logout a user the want to navigation to the user to specify URL after that log out, set the URL return parameter
Password connect do not require the user to password
This endpoint only works for data connection

2.the guide we are going to learn how to redirect a user after the successful login, the usually we are building web app their requirement that the user must be logged in to use app, in that case we need to take care of the user identify and message his authentication token in the application and protected routes
The login form has two files are email and password the user clicks on the button we will display a login action with the type login and pay old as the valued
The authentication the user across page we need to create a higher order component To warp the router might be thinking why do we have to authenticate the user that because in single app we need to maintain the user session
They are two types of routes when it comes to authenticate one is guest route which can only be accessed by guest user such as the login page or register page the private route which be accessed by an authorised will direct to the page

3 the can direct users to a specific URL after they logout they will need to register the redirect url in your tenant or application setting they redacted to allow list URL after logout they need different redirect of application the URL to allow the application status
The query string parameter with the URL as the URL encode the target URL passed in direct to the user after the logout make the request
For the logout request that include the parameter meter add the URL the allowed logout URL list in the settings tab of your autho as the app that is associated with specified parameter of the redirect url to the allowed logout url list tab of autho application that is associated parameter use the parameter to specify how to redirect the user after logout

5.a Java script library for building user interface
React makes it painless to create interactive uis design simple view for each state in our application and react will efficiently update and render just the right components when date change build components that manage their own state, then compose them to make complete uis
Since component logic is written in the java script instead of template can easily pass rich date through your app and keep of the we don't make assumptions about the rest of your technology stack and can develop new features in the react without rewriting code react can also render the server using nide and power mobile app using reactive native

7.the information provided in this document contains general description and or technical characteristic of the performance of the product contained herein this document is not interested ad a substitute for and is not be used determine suitable or reliability of these products for specific user analysis evaluated and testing of the product with respect the relevant specific application or use misuse of the information contained herein if you have suggestions for improvement or have found error in this publication when devices are used for applications with technical safety requirements the relevant instructions must be followed

8. The want to say thank you and support active development of the random use the website and the git hub star to the project by the discord sever paraffin follow the team I'm para interest in growing the reach of the random the web site the topic you can explore repositories in a particular subject area the project contribute to and discover new solution to specific problem the appears on the main page of repository qualities

10. creative work with the world can be exciting and rewarding experience it can also mean bunch of legal thing you did know you had thankfully from the legal need covered in the general that means nobody else can use copy work being at risk of takedown open the source is an unusual circumstances because the expects that other modify share the work the default exclusive right need these permission the project may be have dependencies with licence request that you weren't aware of your projects community or employer also required the project to use license the create project on git hub have the option make the repository private marketing the git hub project public not the same as licensing the project the want them to use distribution modify or contribute the project need to include the open source legally part of project their the right
